

## Give Steel's GHG carbon footprint includes 3 scopes:

### Scope 1

Direct emissions from fuel use and stationary combustion in Give Steel operations.

### Scope 2

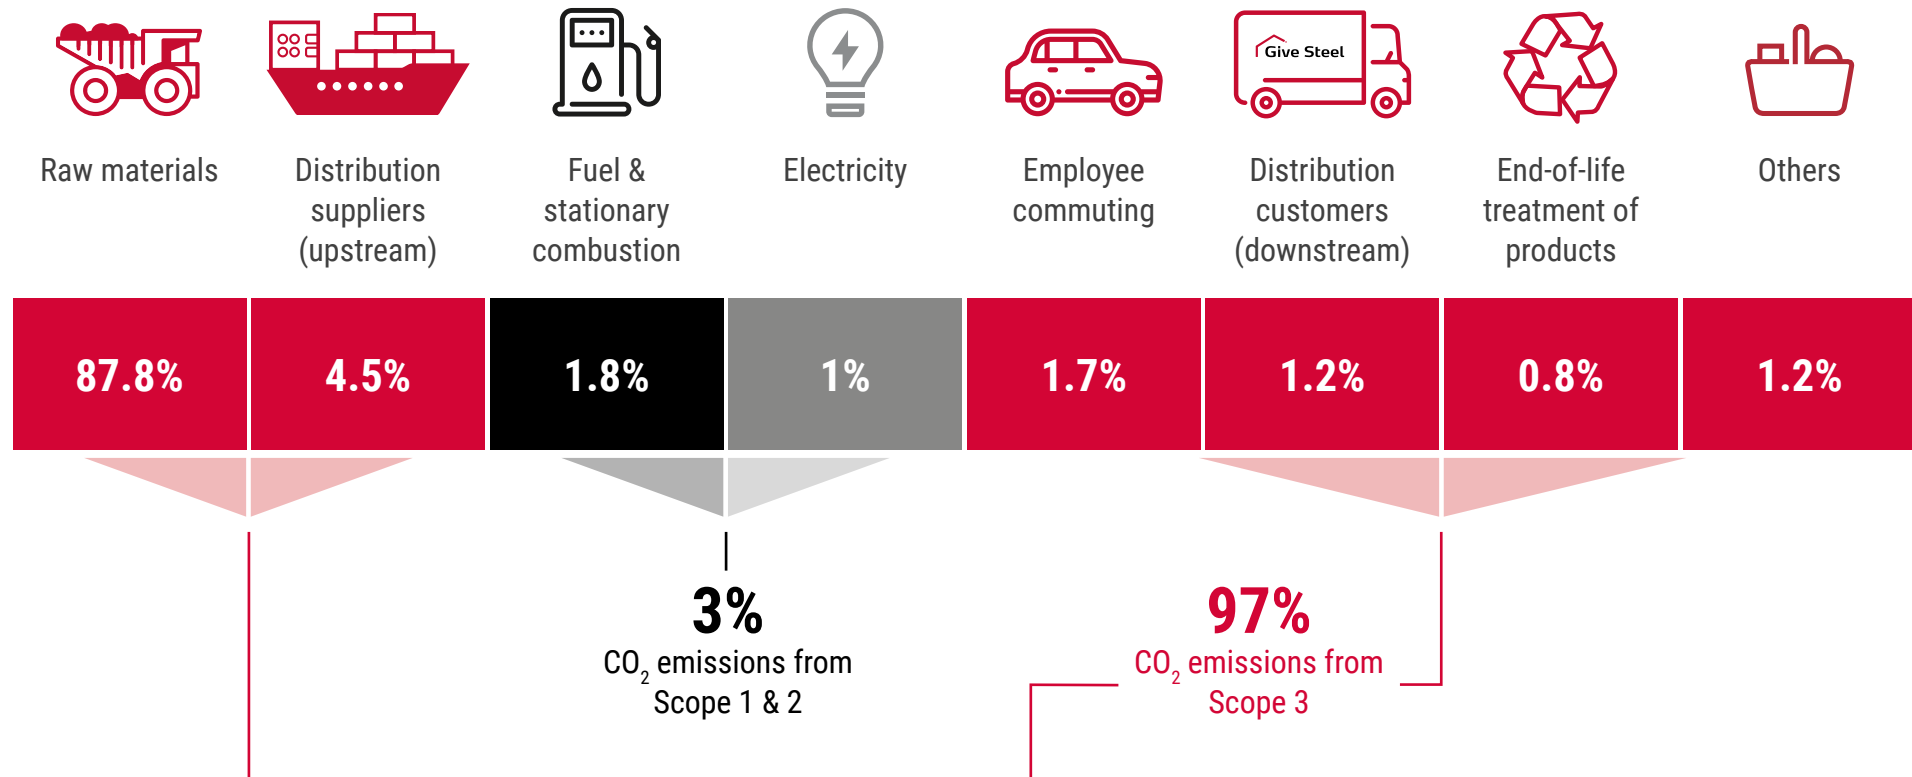

Indirect emissions from purchase of electricity and heating in Give Steel operations.

### Scope 3

Indirect emissions from goods and services used by Give Steel.

# Distribution of emissions 2022

# Annual progressions

We are proud to have been the first Danish manufacturer of structural steel to publish a greenhouse gas report covering all three scopes. The reporting documents our yearly GHG emissions and helps us review and optimize our internal processes. The data quality for this year's report has been further strengthened, and, as such, we believe that this report provides a nuanced and real overview of Give Steel's GHG emissions.

Our scope 1 and 2 emissions have decreased slightly during 2023 compared to 2022. Similarly, we have seen a decrease in emissions from fuel and stationary combustion. During 2023, we also used slightly less energy overall. Scope 1 emissions primarily stem from fuel for our own vehicles, such as company cars, trucks, and other vehicles used in our production - as well as natural gas used to heat up our painting facility. Scope 2 emissions primarily stem from the use of electricity to power machines, robots, and ventilation in relation to our production in Brande.

The increase in scope 3 emissions is mainly a result of the difference in emissions for different raw materials. Emissions related to employee commuting and business trips has also risen slightly during 2023 due to an increase in employees. Scope 3 emissions mainly stem from purchased goods and services and the transport of goods from our suppliers to our factory in Brande, Denmark.

# CO<sub>2</sub> emissions

	2023 (t CO2e)	2022 (t CO2e)
 <b>Scope 1</b>	1,710	1,803
 <b>Scope 2</b>	951	1,104
 <b>Scope 3</b>	90,390	86,080
<b>Total</b>	<b>93,051</b>	<b>88,987</b>

## Future goals

At Give Steel we are proud to be able to present our third year of carbon reporting across all three scopes.

Although we have learned and developed a lot during the last year, naturally there is always room for improvement.

At Give Steel we always strive towards following the latest sustainability trends and initiatives which are some of the important areas where Give Steel will prioritize resources in the coming year. Furthermore, we will keep advancement on our data quality to further strengthen our transparency and sustainability profile.

### **Our near-future targets include:**

- Further digitalization and automation of product tracking data.
- Strengthening of EU taxonomy compliance.
- Replacement of energy sources with more renewable alternatives where possible.
- Developing our science-based target together with the Science-Based Target initiative (SBTi).
- Further advancement of Give Steel EPDs.
